Application and Removal Guide

Designed for
Securement
& Comfort

Tegaderm™ I.V. Advanced
Part of the Full Line of Tegaderm™ Brand I.V. Site Dressings

3M™ Tegaderm™ I.V. Advanced Securement Dressing

Application and Removal Techniques

3M™ Tegaderm™ I.V. Advanced Securement Dressings are comprehensively designed to deliver exceptional patient care through advanced catheter securement, superior wear time, gentle removal, and excellent moisture management. Tegaderm™ brand dressings are breathable, sterile, transparent and waterproof, and provide a barrier to external contaminants.*

Suggested Applications

- Short peripheral & midline venous catheters
- Central venous catheters (CVC)
 - Internal jugular (IJ) vein
 - Femoral vein
 - Subclavian vein
- Peripherally inserted central catheters (PICCs)
- Tunneled CVCs
- Implanted infusion devices (ports)
- Arterial catheters
- Dialysis catheters
- Any percutaneous device

Dressing Selection

- Choose a dressing large enough to provide at least a one-inch margin of adherence on dry, healthy skin around the catheter site.

Site Preparation

- Prepare the site according to your facility's protocol.
- Clipping hair at the site may improve dressing adhesion.
 - Shaving is not recommended.
- 3M™ Cavilon™ No Sting Barrier Film may be used with Tegaderm™ I.V. Advanced Securement Dressings. Apply Cavilon™ No Sting Barrier Film evenly to the skin. Avoid the area immediately surrounding the insertion site.
- **Allow all preps and protectants to dry completely before applying Tegaderm™ I.V. Advanced Securement Dressing to ensure good adhesion and prevent skin irritation.**

Site Care

- Follow universal precautions as indicated by established protocols for infection prevention.
- Observe site daily for signs of infection or other complications.
- If infection is suspected, remove Tegaderm™ I.V. Advanced Securement Dressing, inspect the catheter site directly, and determine appropriate medical intervention.

3M™ Tegaderm™ I.V. Advanced Securement Dressing

1683

1683 Application Technique

1 Prepare the site according to your facility's protocol. Allow all preps and skin protectants to dry completely. Open package and remove sterile dressing.

2 Remove liner to expose adhesive and place dressing adhesive side up on sterile field or inside of dressing package, prior to inserting catheter.

3 Hold dressing with one hand, grasping the non-adhesive portion of the dressing. Orient clear portion of dressing over insertion site with notch ends of dressing (the "fingers" of the dressing) pointing toward the patient's fingers.

4 Position dressing with the **top of the keyhole notch lined up with the connection point of the IV catheter hub** and IV tubing.

5 Apply dressing to skin applying firm, gentle pressure to window film. Pinch film firmly around catheter tubing connection. Gently lift tubing connection and press border firmly under catheter hub.

6 Slowly peel frame away from border edge while simultaneously applying firm pressure to border edge. Smooth entire dressing into skin to ensure optimal adhesion.

7 Peel securement tape strip from carrier frame. Align securement strip with lower dressing edge. Press first half of securement tape strip firmly onto dressing at tubing connection site; continue strip application over tubing connection and adhere to other side.

8 Prepare and apply documentation tape strip. *Tape strip may be used as a second securement strip* in order to create J loop with IV extension tubing.

9 Apply firm pressure to entire dressing to ensure optimal adhesion.

1683 Removal Technique

1 Remove securement tape strip from dressing.

2 Gently grasp soft cloth edges below keyhole notch.

3 Ensure IV catheter is stabilized as dressing is lifted from skin using low and slow technique.

4 Peel dressing toward catheter insertion site.

3M™ Tegaderm™ I.V. Advanced Securement Dressing

1685

1685 Application Technique

1 Prepare the site according to your facility's protocol. Allow all preps and skin protectants to dry completely. Open package and remove sterile dressing.

2 Remove liner to expose adhesive. Place dressing adhesive side up on sterile field or inside of dressing package.

3 Position notch edge of dressing over catheter hub, placing stabilization border over catheter "wings." Do not stretch dressing over skin surface.

4 Apply dressing to skin applying firm, gentle pressure to window film. Pinch film firmly around catheter tubing connection. Gently lift tubing connection and press border firmly under catheter lumens.

5 Slowly peel frame away from border edge while simultaneously applying firm pressure to border edge. Smooth entire dressing into skin to ensure optimal adhesion.

6 Remove securement tape strip with notch from liner. **Two small adhesive free tabs from liner will remain on tape strip liner.** Partially fold securement tape strip in half at notch.

7 Apply tape strip's pre-cut notch completely underneath catheter's molded junction. The notch opening should face the insertion site. Peel paper tabs from liner corners. Smooth entire dressing surface; working from catheter insertion site out toward dressing edge.

8 Prepare and apply documentation label over the top of the exposed molded junction. Press first half of strip against the junction; then adhere the other side.

9 Apply firm pressure to entire dressing to ensure optimal adhesion.

1685 Removal Technique

1 Remove all securement tape strips from dressing.

2 Gently grasp soft cloth edges below keyhole notch.

3 Lift dressing on each side from skin using low and slow technique.

4 Peel dressing toward catheter insertion site until removed.

3M™ Tegaderm™ I.V. Advanced Securement Dressing

1685

1685 PICC Application Technique

1 Prepare the site according to your facility's protocol. Allow all preps and skin protectants to dry completely. Open package and remove sterile dressing.

2 Remove liner to expose adhesive. Place dressing adhesive side up on sterile field or inside of dressing package.

3 Position notch edge of dressing over catheter hub, placing stabilization border over catheter "wings." Do not stretch dressing over skin surface.

4 Apply dressing to skin applying firm, gentle pressure to window film. Pinch film firmly around catheter tubing connection. Gently lift tubing connection and press border firmly under catheter lumens.

5 Slowly peel frame away from border edge while simultaneously applying firm pressure to border edge. Smooth entire dressing into skin to ensure optimal adhesion.

6 Remove securement tape strip with notch from liner. **Two small adhesive free tabs from liner will remain on tape strip liner.** Partially fold securement tape strip in half at notch.

7 Apply tape strip's pre-cut notch completely underneath catheter's molded junction. The notch opening should face the insertion site. Peel paper tabs from liner corners. Smooth entire dressing surface; working from catheter insertion site out toward dressing edge.

8 Prepare and apply documentation label over the top of the exposed molded junction. Press first half of strip against the junction; then adhere the other side.

9 Apply firm pressure to entire dressing to ensure optimal adhesion.

1685 PICC Removal Technique

1 Remove all securement tape strips from dressing.

2 Gently grasp soft cloth edges below keyhole notch.

3 Lift dressing on each side from skin using low and slow technique. Peel dressing toward catheter insertion site until removed.

3M™ Tegaderm™ I.V. Advanced Securement Dressing

1688

1688 Application Technique

1 Prepare the site according to your facility's protocol. Allow all preps and skin protectants to dry completely. Open package and remove sterile dressing.

2 Remove liner to expose adhesive. Place dressing adhesive side up on sterile field or inside of dressing package.

3 Position notch edge of dressing over catheter hub, placing stabilization border over catheter "wings." Do not stretch dressing over skin surface.

4 Apply dressing to skin applying firm, gentle pressure to window film. Pinch film firmly around catheter tubing connection. Gently lift tubing connection and press border firmly under catheter lumens.

5 Slowly peel frame away from border edge while simultaneously applying firm pressure to border edge. Smooth entire dressing into skin to ensure optimal adhesion.

6 Apply tape strip's pre-cut notch completely underneath catheter's molded junction. The notch opening should face the insertion site. Smooth entire dressing surface; working from catheter insertion site out toward dressing edge.

7 Prepare and apply documentation label over the top of the exposed molded junction. Press first half of strip against the junction; then adhere the other side.

8 Apply firm pressure to entire dressing to ensure optimal adhesion.

1688 Removal Technique

1 Remove all securement tape strips from dressing.

2 Gently grasp soft cloth edges below keyhole notch.

3 Lift dressing on each side from skin using low and slow technique.

4 Peel dressing toward catheter insertion site until removed.

3M™ Tegaderm™ I.V. Advanced Securement Dressings

1689

1689 Application Technique

1 Prepare the site according to your facility's protocol. Allow all preps and skin protectants to dry completely. Open package and remove sterile dressing.

2 Remove liner to expose adhesive. Place dressing adhesive side up on sterile field or inside of dressing package.

3 Position notch edge of dressing over catheter hub, placing stabilization border over catheter "wings." Do not stretch dressing over skin surface.

4 Apply dressing to skin applying firm, gentle pressure to window film. Pinch film firmly around catheter tubing connection. Gently lift tubing connection and press border firmly under catheter lumens.

5 Slowly peel frame away from border edge while simultaneously applying firm pressure to border edge. Smooth entire dressing into skin to ensure optimal adhesion.

6 Remove securement tape strip with notch from liner. **Two small adhesive free tabs from liner will remain on tape strip liner.** Partially fold securement tape strip in half at notch.

7 Apply tape strip's pre-cut notch completely underneath catheter's molded junction. The notch opening should face the insertion site. Peel paper tabs from liner corners. Smooth entire dressing surface; working from catheter insertion site out toward dressing edge.

8 Prepare and apply documentation label over the top of the exposed molded junction. Press first half of strip against the junction; then adhere the other side.

9 Apply firm pressure to entire dressing to ensure optimal adhesion.

1689 Removal Technique

1 Remove all securement tape strips from dressing.

2 Gently grasp soft cloth edges below keyhole notch.

3 Lift dressing on each side from skin using low and slow technique.

4 Peel dressing toward catheter insertion site until removed.

3M™ Tegaderm™ I.V. Advanced Securement Dressings

Provides secure hold

- Reinforced border, deep notch, and tape strips work together to enlist the entire dressing in securement
- Innovative adhesives hold strongly, manage moisture, and release gently
- Designed to maintain securement by preventing edge lift, flexing with patient movement, and managing moisture

Excellent value

- Can potentially reduce the number of dressing changes and restarts
- May be worn for the life of a PIV catheter - Provides up to 7 days of wear time for CVC's**

Easy to apply and remove

- Designed to promote consistent application
- Frame delivery makes placement accurate and easy

Supports infection prevention goals

- A waterproof film coating on all pieces provides a barrier to external contaminants including liquids, bacteria and viruses*
- Allows continuous monitoring

Deep notch

- Fits easily and conforms around hubs and lumens
- Designed to discourage edge lift
- Designed to reduce the risk of catheter manipulation and dislodgement

Highly breathable transparent film

- Designed to release moisture quickly to provide better wear time and securement
- A waterproof, sterile barrier to external contaminants*

Picture-frame delivery

- Minimizes potential to stick to gloves or to itself
- One-handed application

Securement tape strips

- Enhance securement while promoting consistent application
- Waterproof film coating
- Pre-printed documentation label for dressing changes

Stabilization border

- Maximizes securement, breathability and wear time
- Flexible and conformable
- Reduces edge lift to maintain securement
- Waterproof film coating

**In vitro* testing shows that the transparent film of 3M™ Tegaderm™ I.V. Advanced Securement Dressing provides a viral barrier for viruses 27 nm in diameter or larger while the dressing remains intact without leakage.
