

Geo-Matt® Surface Geometry

Talk about innovation!

Perhaps Span-America's best-known product, Geo-Matt, was designed and tested in the early 1980's in conjunction with the well-known Institute for Rehabilitation and Research (TIIR) at the Baylor College of Medicine.

Geo-Matt was the very first overlay engineered specifically to counter each of the major causative factors in the formation of pressure injuries: direct pressure, shearing, friction, and the build-up of heat and moisture.

Configured with more than 800 precision-cut individually articulating cells in three distinct zones, its smaller cells give contoured support to the head and lower extremities, while the larger cells support and comfort the heavier thighs and torso.

Once launched commercially, its combination of pressure ulcer prevention and user comfort quickly made it the overlay of choice in facilities throughout the US. In the years since, we've incorporated its geometry throughout our product lines, from seat cushions to mattresses to patient positioners.

Exclusive "Ring-of-Air"® helps to ventilate surface, channeling heat away from the patient.

More than 800 individual cells respond independently to absorb pressure points and minimize shearing.

Unique Soft Skin® Sleeve protects the overlay, is vapor permeable but resistant to liquids, and doesn't interfere with support surface function.
