# About JOBST®

## Gradient compression therapy – the essential element

**Gradient compression legwear, pioneered by Conrad Jobst over 60 years ago, remains the basis for the management of venous disease and lymphedema.**

Gradient compression reduces swelling and helps prevent the pooling of fluid in the venous or lymph systems and in the interstitial spaces. This results in clinically proven improvement to the venous and lymph fluid return, thus providing beneficial effects for persons with edema or venous disease.

JOBST® gradient compression garments work by increasing the tissue pressure to help balance the flow of fluid across the capillaries of the limb. This helps to reduce swelling.

Sample of a typical 20-30 mmHg\* compression stocking

## Fabric...

JOBST® compression therapy comes in a wide assortment of fabric types. From UltraSheer compression therapy to rigorous custom flat-knit for maximum containment, there is a fabric choice to meet patient need. If color is a concern, JOBST® compression therapy comes in a wide array of fashionable colors.

## Compression Levels...

JOBST® ready-to-wear medical compression products are available in four compression levels: 8-15, 15-20, 20-30 and 30-40 mmHg. JOBST® Custom garments can be ordered in a variety of compression levels. The right compression level helps ensure that venous and lymphatic disease is managed effectively.

## Styles...

JOBST® Compression Therapy is available in many styles. Any style is suitable provided the affected area is covered.

# Venous Overview

## Blood, Veins & Valves:

### How it circulates

The circulation of blood is possible based on three major components: the heart, arteries and veins.

The pumping action of the heart forces blood through the arteries and veins of the body. Arteries are the vessels that carry blood from the heart to the body tissues. Veins return the blood back to the heart.

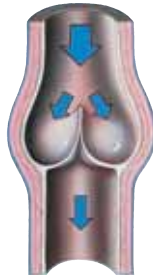

### How they work

Valves, located inside the veins, keep the blood flowing in one direction - toward the heart. Valves open to allow blood to return to the heart. They then close to prevent the blood from flowing backwards.

Valves open when muscles contract, allowing blood to return to the heart.

Valves close when muscles relax. Blood cannot flow backwards.

### How vein problems occur

When a valve no longer closes properly or fully, problems can develop. Weak or damaged valves cannot support the blood when the muscle relaxes.

This allows blood to flow backwards in the vein, creating pressure on the valves below. These valves can also weaken. Blood return to the heart is reduced and other complications can develop.

A damaged valve

### Pooling

A damaged or poorly closing valve in a vein allows blood to flow backwards. This can cause blood to back up and collect in the veins of the lower leg. Pooling of blood in the veins of the lower leg causes swelling, especially near the ankles and calves.

### Enlarged veins

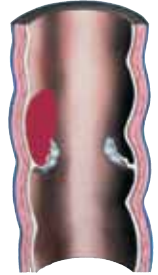

When a valve is damaged or missing, the backup of blood results in higher pressure in the veins below. This higher pressure, which directly affects the superficial veins (those closest to the skin), may strain the walls of the vein, causing them to enlarge and even twist.

As the veins enlarge, the valves within them can no longer close fully. Enlarged superficial veins are visible bulges under the skin of the leg. These "ropy" veins are called varicose veins.

### Blood clots

When blood cells stick together near a valve, a clot can form which may partially or completely block the flow of blood through the vein. Slow moving or poorly flowing blood in the veins is more likely to clot. Clots may be caused by sluggish blood flow, injury to a vein, or abnormal blood clotting factors.

A clot in the deep veins, which is the most serious, is called a deep vein thrombosis (DVT). Part of a DVT may break loose and lodge in the lungs or may also cause long-term problems in the leg.

### Causes and risk factors of venous disorders

- Heredity
- Slouching or sitting for long periods
- Age
- Tight fitting clothing
- High-heeled shoes
- Obesity
- Alcohol consumption during air travel
- Hot baths and excessive exposure to the sun
- Dehydration
- Pregnancy

# Lymphedema Overview

## Introduction

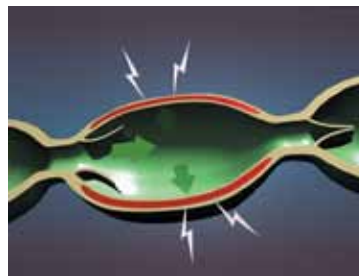

The complex circulatory system is comprised of two systems:

- the closed blood circulation consisting of veins and arteries and
- the half-open lymphatic system which, in addition to its known immunological functions, also has important circulatory functions.

extending throughout the entire body. The lymph is transported from these vessels to the larger, deeper lymph vessels, the lymph collectors.

The lymph collectors run to the regional lymph nodes. This gives rise to different lymph territories separated from each other by lymphatic watersheds.

The lymph nodes have important immunologic functions. Bacteria and cell debris are filtered out of the lymph by immune defense cells. The lymph nodes also contain specific cellular defense substances which can destroy cancer cells.

## Lymphedema

In this complex system of lymphatics, disorders can develop which can have serious consequences. The most prevalent of these disorders is lymphedema.

## Functional anatomy

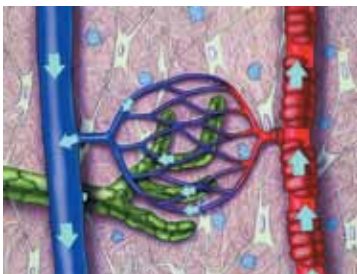

The lymphatic system can be divided into three functional parts:

1. lymph production in the initial lymph vessels,
2. lymph transport through the lymph collectors and
3. lymph concentration and filtration in the lymph nodes.

The lymph vessels are equipped with valves which determine the direction of flow. The lymph vessel segment bounded by two valves is known as a "lymphangion". Each lymphangion has an innervated powerful smooth muscle that makes it pulsate like a small heart which transports the lymph from one lymphangion to the next.

## Lymph production

Lymph production takes place in the terminal vessels which are comprised of the blood capillaries and initial lymph vessels.

Lymph transport is influenced by several auxiliary mechanisms. The most important of these in the limbs are the muscle pumps that come into effect during movement.

On its way into the closed blood circulation, the lymph passes through several lymph nodes frequently arranged in groups.

## Causes

The causes of lymphedema may be found in lymph production, lymph transport or lymph nodes.

Primary lymphedema is usually due to a birth defect, such as hyperplasia or hypoplasia of the lymph capillaries or lymph vessels.

Secondary causes can be due to disease or damage to the originally intact lymphatic system.

## Lymph transport

The initial lymph vessels make up a superficial, valveless network

# Business Building

## 1 Customized Prescription Pads

Target physicians and healthcare professionals by marketing prescription pads customized with account information.

## 3 Physician Marketing Program

Mail a packet of educational materials to each medical professional which we identify as a valuable business partner.

## 2 Leg Health Day

Celebrate leg health with a one-day, educational event to reward current and attract new customers.

## 4 JOBST® Patient Reorder Reminder Program

Reminder programs (HIPAA-compliant) bring customers back for repeat sales.

## 5 CO-OP Advertising Support

Targeted advertising increases awareness of a store's products and service offerings.

## 7 Displays and Merchandisers

High-end merchandisers create a destination center while maximizing inventory storage and profit per square foot (fees and minimum order requirements apply).

## 6 Educational Staff Training

BSN offers the best training in the industry to educate you and your staff on all compression, orthopedic, and arthritis products.

# JOBST® UltraSheer

JOBST® UltraSheer is the ultimate medical compression stocking when it comes to today's discerning female. Designed specifically for women who prefer a formal look, JOBST® UltraSheer offers unparalleled sheerness in a lightweight design, ideal for daily activities or more formal occasions. The epitome of style, fashion, and function... only you will know the stocking you are wearing has medical benefits.

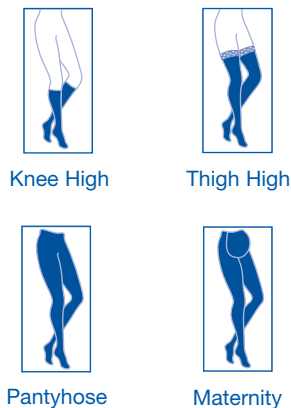

- Fine yarns for a beautiful sheer look
- Soft feel for all-day wearing comfort
- All-day comfort knee band secures fit and improves wearing comfort
- Two thigh band options for personal preference
- JOBST Advanced Comfort™, a unique blend of yarns and finishes, keeps you cool, dry, and comfortable

# JOBST® UlcerCARE™

JOBST® UlcerCARE is designed for maximum patient compliance for the effective management of venous ulcers. The two-part compression system incorporates a liner that gently holds the wound dressing in place, while the outer stocking delivers the optimal compression to effectively treat a venous ulcer.

- Low profile to be worn with any style of shoes; allows wearer to maintain a normal lifestyle
- Helps manage edema
- Improves ulcer healing outcomes due to a high static stiffness index for maximum patient compliance
- Seamless circular knit is easy to put on and comfortable to wear
- Available as a slip on style (without zippers) and with zippers
- Zippers are available on either the medial (inside) or lateral (outside) area of the leg

# Other BSN Products

## Tricofix®

Tricofix® protects the skin surface under compression garments, zinc gel or adhesive bandages. Useful as skin protection under plaster of Paris or synthetic cast and as a lining for lymphedema wrapping to reduce irritation.

- 100% cotton for non-irritative comfort.
- Easy application, may be cut anywhere, does not run or fray.

## Artiflex®

Artiflex® is a multipurpose padding bandage that ensures even distribution of pressure as in phlebological or lymphedema applications. Also useful as padding under plaster or synthetic casts.

- Non-woven padding 40% polyester, 40% polypropylene, 20% polyethylene.
- Non-absorbent, so padding effect is not compromised even in humid conditions.

## Comprilan®

Short stretch compression bandage – Comprilan® is specifically designed for the management of venous leg ulcers, lymphedema and edema. Unlike long stretch bandages. Comprilan® provides both compression and high resistance to stretch to increase venous and lymphatic return.

- Interlocking weave provides short stretch to ensure consistent compression.
- 100% cotton bandage, cool and light; the open weave fabric allows the skin to breathe.

## Isoband®

Isoband® is an elastic multipurpose bandage, suitable for phlebological indications and compression bandaging for moderate to severe lymphedema. Other common applications include splint wrapping and support bandaging for dislocations.

- Made from 85% cotton, and 15% cellulose for superior comfort.
- Short stretch, longitudinally elastic with maximum stretch of 90% for high working pressure.

## CompriFoam®

Even pressure distribution for effective compression therapy.

- 100% polyurethane, latex-free.
- Air and moisture permeable.

## JOBST® foam

Kidney shaped foam pad.

- 100% synthetic rubber, free of natural rubber.
- Hand washable / air dry, reusable.

# Donning Aids and Accessories

Donning Devices help you put on JOBST® compression stocking, while providing convenience and value.

## JOBST® Easy Wash & Wear Kit

Everything needed to help apply and extend the life of JOBST® Hosiery. Kit includes JOBST® Donning Gloves, Wash Bag, Jolastic® Washing Solution, and brochure with helpful hints for putting on JOBST® Hosiery.

## JOBST® Stocking Donner

Easy to use device to help apply JOBST® Hosiery. Ideal for people who have limited dexterity or have difficulty reaching their feet. Use with closed and open toe styles. Available in 2 sizes: Regular and Large Calf.

## JOBST® Donning Gloves\*

Putting on JOBST® Hosiery is always easier with JOBST® Donning Gloves! JOBST® gloves help create friction, provide grip and help to evenly distribute the fabric on the leg.

## Foot Rest

A convenient device to use when measuring for Ready-To-Wear or Custom-made garments. The Foot Rest elevates the patient's foot comfortably at the heel to allow easy measuring up the length of the leg.

## JOBST® Stocking Slips

For use with open toe styles only. Helps the stocking slide smoothly onto the foot by reducing friction between the patient's skin and the compression stocking.

## “IT STAYS!”® Roll-On Adhesive

Designed to keep JOBST® Hosiery in place. Ideal for thigh high lengths that do not have a silicone band or when a garter belt is not an option. Helpful Hint: Apply vertical strips for best results.

## Jolastic® Washing Solution

This warm water wash is formulated to remove soil, body oils, and skin salts quickly and thoroughly without damage to fabric. Jolastic® Washing Solution will help extend the life of JOBST® garments.

\* Caution: This product contains natural rubber latex which may cause allergic reactions.

# Garter Belts

Garter Belts\* are designed to hold stockings – usually thigh highs and other garments that do not extend to the groin – securely in place. The JOBST® Garter Belts, which all use a clasp / hook fastener, are available in 4 styles to meet a variety of preferences. NOTE: Legwear for men should be measured within 2" (5 cm) of the groin.

**Standard:** This “traditional” garter belt, which wraps around the waist and hip area, secures the garment comfortably in place with 2 adjustable fasteners in the front and 4 in the back. Fits up to a 56" (142 cm) waist.

**Adjustable:** This easy-to-wear garter belt anchors the fasteners from a comfortable waist band with a VELCRO closure. Fits up to a 67" (170 cm) waist.

**Over-the-Shoulder (Single/Double):** Designed for the patient who cannot tolerate pressure over the abdomen. Uses the same easy-to-use clasp / hook fasteners.

# Activa® Soft Fit Graduated Therapy 20-30 mmHg\*

Professional graduated compression support for healthy, great feeling legs and feet. The Activa® Soft Fit legwear is constructed with an advanced microfiber for an incredibly soft feel. This amazing material also traps and evaporates moisture away from the skin leaving it dry and cool. The all day comfortable wear and fashionable style are perfect for either casual or dress attire.

- Moisture wicking microfiber yarns
- Elegant, smooth look
- Reinforced foot and ample toe area
- Lace or silicone dot top band (Thigh High)
- Control top panty section

# PressureLite® Diabetic Socks & Super Socks\*

The PressureLite® Pressure Relieving Diabetic Socks provide extra padding in key areas of the foot without the added bulk, so they fit comfortably into any shoe. These deluxe therapeutic socks limit skin injury and pain by absorbing the friction and pressure caused by the rubbing of the socks against the foot and shoe. Socks do not bind because of the extra cross-stitch of the design.
