

Loss of Lean Body Mass Can Lead to Functional Decline^{1,2}

Loss of lean body mass (LBM) and strength is associated with malnutrition and is also evident with aging³⁻⁷

- LBM loss increases with age³⁻⁷
- Sarcopenia is the loss of skeletal muscle mass and function, which occurs with advancing age and compromises recovery and survival⁸

Complications increase with greater LBM loss¹

- LBM loss can affect strength, walking, rising out of a chair, climbing stairs, and risk of falls²

To learn more about how LBM loss and sarcopenia affect your patients, visit fightsarcopenia.com, or contact your Abbott sales representative.

New Ensure® Enlive® has HMB + 20g Protein

NEW Ensure Enlive has a patented formula to help improve patient outcomes.^{9,10}

HMB can help reduce protein degradation in skeletal muscle cells.¹¹

HMB preserves muscle in older adults^{12*}

	New Ensure Enlive per 8 fl oz	Ensure® Plus per 8 fl oz
2X/Day Rx	1.5g of CaHMB	N/A
	20g of high-quality protein (53% more)	13g of high-quality protein
	26 vitamins and minerals	26 vitamins and minerals
	120% DV of vitamin D (50% more)	80% DV of vitamin D
	350 kcal	350 kcal

Two servings per day are recommended to help rebuild lost muscle associated with malnutrition.

STRENGTH FOR LIFE

*Study Design A randomized, controlled trial evaluated the effect of HMB on muscle decline during 10 days of complete bed rest in women 60 to 79 years of age. Subjects were randomized to receive HMB (n=11) or control (n=8) for 5 days before and 8 weeks after bed rest.
