1 CONNECTION OF IV-SET

1. Remove PrimeStop cap.
2. Move collar backwards to activate its rotating function (2). The rotating collar helps to tighten the connection once inserted.
3. Connect Spin-Lock® connector to counterpart, such as Canesite® extension line.
4. Move collar forward and screw it clockwise onto the counterpart.

2 DISCONNECTION OF IV-SET

1. Unscrew the collar counter-clockwise.
2. Move collar backwards up to the stop position.
3. Turn the collar counter-clockwise to disconnect. The hexagonal design of the stop helps to make the disconnection easier.

Spin-Lock® Connector
Rotating collar for easy and tight connection
