

model 7550 Wall-Mount Fold-up WHEELCHAIR SCALES

CUSTOMER TESTIMONIALS

“ The new 7550 wheelchair scale by DETECTO has been instrumental in helping us take care of our wheelchair-bound patients. Being able to get an accurate weight on the patient without having to lift them from the wheelchair has not only improved the patient visit experience, but also has been beneficial for staff member safety by reducing the amount of lifting we used to do to help these patients get on and off a scale. The scale itself does not take up a lot of room in our clinical area and is easily incorporated into our daily patient work flow. DETECTO has designed it very well. It is extremely functional and does not take up a lot of real estate, which is always a premium in an efficient physician office. I highly recommend this scale for any orthopaedic medical practice that takes care of heavier patients on a daily basis. ”

Joe Caputo

Chief Executive Officer

Orthopaedic Specialists of the Four States, LLC

“ Using the DETECTO 7550 wheelchair scale, we have been able to accurately weigh individuals that are unable to stand up on a traditional scale. To ensure patient safety with durable medical equipment, it is imperative that we have accurate weight. Previously, we had to use unreliable estimates that caused both safety issues and liability concerns. ”

Stephanie Brady

Director of Programs

The Independent Living Center

“ Having accurate patient weights is vital to effective management of chronic diseases like congestive heart failure and diabetes. Using the Detecto 7550 wheelchair scale, we are now able to weigh patients that have not been accurately weighed for several years. We can ensure that prescription dosages and other physician orders are appropriate for their weight. The long-term patient impacts are tremendous. ”
