

INGREDIENTS	PURPOSE
Wood Pulp	Helps absorb wetness and store it away.
Polypropylene	A common material in fibers and films. Used to deliver softness, durability, and protection.
Polyethylene	A common material used in fibers and films. We use it to deliver softness, breathability, and protection.
Polyurethane elastics	A material with stretch that provides a great fit and helps prevent leakage.
Polyolefin Elastic	A material with stretch that provides a great fit and helps prevent leakage.
Adhesives	Adhesives are used to hold the components together or help adhere the products to garments.
Colorants	Pigments and colorants are used to provide the colors and designs seen on our products. The amounts we use per product are very small and are evaluated to ensure they are safe and non-sensitizing.
Printing Inks	Printing inks are used to provide a decorative design. The colorants and pigments we use are evaluated to ensure they are safe and non-sensitizing.
