

VOLDYNE® & TRIFLO II™

Incentive Spirometers

Never Underestimate the “Power” of a Deep Breath!

After major abdominal and chest surgery, effective deep breathing and coughing play a crucial role in decreasing post-operative respiratory complications. But a deep breath and cough are the last things a patient wants to do immediately after surgery! Sometimes, a little incentive is all that’s needed.

Hudson RCI’s VOLDYNE 5000, VOLDYNE 2500, Pediatric VOLDYNE and TriFlo II have set the standard for incentive breathing exercisers (IBEs). All incorporate patient-oriented features and easy-to-understand instructions that assist the patient in performing effective post-operative deep breathing and coughing exercises and provide just the right incentive for doing so.

Voldyne and TriFlo II ... put the “power” of a deep breath in your patient’s hands.

Features

- Voldyne 5000, 2500 and the Pediatric Voldyne provide the variety of volume oriented ranges used for treating both adult and pediatric patients
- Pediatric Voldyne offers colorful labeling and child-oriented instructions to engage the imagination and stimulate patient use
- TriFlo II incentive spirometer features a distinctive triple chamber design and multi-colored indicators and is the world’s leading flow-oriented IBE
- All Voldyne and TriFlo II products incorporate easy-to-understand, instructional visual cues that promote optimal inhalation
