ERGOBAUM DUAL

Ergobaum Dual Ergonomic Crutches (1 Pair) - Double Function Shock Absorber Underarm Crutches With Arm Support.

- The Ergobaum Dual ergonomic crutch is a double function shock absorber underarm crutch with arm support. it is designed to facilitate the use of crutches, reducing secondary injuries associated with underarm crutches while providing comfort during short or long term use.
- The Ergobaum Dual is an Adult crutch for users between 5'7" and 6'8" and supports up to 380 lbs
 - The Ergobaum Dual generation model contains different shock absorber systems throughout the crutch: One shock absorbing system is located in the underarm support, which consists of five sequential shock absorbers that prevent compression and impingement of the underarm nerves. The second shock absorber system found in this crutch is located in the grip of the crutch and the third shock absorber system is located in the tip of the crutch. Together, the three-shock-absorber-systems make the Ergobaum Dual the most comfortable and advanced crutch system in the world.

- The patented sequential shock absorber systems plus the anatomical foaming pad cover provides users with the best non-restricted blood circulation while walking on crutches and also provides axillary nerve decompression while reducing pressure when you walk
- The Ergobaum Dual is the only crutch that allows the user to walk with a 7-degree underarm axillar internal rotation with respect to the

Order# SKU A-037

grip. This allows for the most comfortable ergonomic result while the user walks with the crutch, avoiding compression of the underarm nerves and compression on the grip while walking. No other crutch in the world has such advanced technology.

- All three shock absorbers combined plus the Ergocap Rubber Tip technology allows for reduced pressure to the body or injured limb while walking on crutches. The main areas that the Ergobaum Dual targets to improve while walking with these crutches are the upper chest including the shoulders, the lower back including the hip and knee joints, and the palm of the hand and the user's fingers.

- The Ergobaum Dual Crutch has the ability to be folded when the user is not currently using the crutch, especially when the user needs to store it in a small compartment while traveling or moving. There is a button on the hand grip that allows for users to collapse the crutch and make it occupy half of the space that it occupies while fully assembled.

Order# SKU A-037	Size: 5'7" to 6'10" Adj	HSPC Code: N/A
Measure: 2'.3" x 11'.2" x 3' Folded	Weight: 4 LBS per unit	Materials: Medical Aluminum, Rubber, Soft Air Pads.

Ergobaum Dual or Ergobaum Royal?:

The Ergobaum Dual contains the same features as the world's famous Ergobaum Royal Crutches. The main difference is that the Ergobaum Dual's main support is in the underarm and also in the arm, while the Ergobaum Royal is strictly a forearm crutch. The Ergobaum Royal contains two different shock absorber systems while the Ergobaum Dual has three different shock absorber systems (one extra system for the underarm support of the crutch)
