Airway Management

SubG™ Endotracheal Tube

Our SubG subglottic endotracheal tubes are designed to reduce the risk of nosocomial infections due to aspiration of oral and upper airway secretions.

» Polyurethane cuff helps to prevent channel formation
» High volume, low pressure barrel-shaped cuff for optimal sealing
» Kink-resistant tubing with easy-to-read insertion markings
» Subglottic suction port for removing secretions above the cuff
» Suction line cap keeps contaminants out of lumen

mBrace

The new mBrace from Medline provides the enhancements hospitals have been looking for in ET tube holder technology. Designed with patient comfort and caregiver efficiency in mind, the mBrace can help customers achieve their skin breakdown initiatives.

» Clear silicone adhesive pads provide complete visibility to the skin and are gentle upon removal
» Silicone pads can be peeled back, adjusted and reapplied, giving the caregiver access to clean sensitive skin without removing the device
» Additional strap connection points allow caregiver flexibility for difficult patients and added security to help prevent lip ulcers
» Sliding ET tube track allows the ET tube to be moved side to side in accordance with hospital protocols
» ET tube strap securely locks the ET tube in place
» Adjustable neck strap provides security
» A 4 point, full-head strap available separately
» Available with and without a bite block

HCS951001

IntelliCuff® Cuff Pressure Controller

Continuous and automatic cuff management system.

» IntelliCuff cuff pressure controller continuously measures and automatically maintains set cuff pressure of ET or tracheal tubes during mechanical ventilation

» Secures airway management in intensive care units, operating rooms and air transport

» Large display keeps important data visible at all times, while the convenient buttons make adjusting and verifying settings easy

» Automatic regulation of cuff pressure helps keep pressure consistently within range, which could help reduce the risk of ventilator associated pneumonia (VAP) and tracheal injuries

HCSTIC6A

Longer, **easy-grip jaws** make the inner cannula easier to remove

Dual "ramps" make a positive-click connection with the ventilator connector jaws

Positive-Click jaws hold tight to help prevent disconnect. Releases easily with a twist

HCSTIC4681A

Smaller corrugations, tapered inner walls and flush-fit with cannula let inline suction catheters pass with ease

360 degree swivel for better movement and less torsion on the inner cannula

Blenders

Our blenders require very little maintenance and last for years.

» Suitable for use in Emergency Room and ICU where accurate oxygen concentration is required
» Double-ended proportioning valve enables easy adjustment of oxygen concentration from 21% to 100%
» Two-stage pressure-balancing mechanism is adopted to deliver steady oxygen concentration
» Two outlet ports and bleed valve allow a wide range of applications
» Internal bypass and alarm mechanism ensure safe use
» Accuracy: ± 3% FS

TrachVox® Speaking HME

TrachVox HME helps spontaneously breathing tracheostomy patients verbally communicate. When depressed, the HME changes the airway flow to make speaking possible. Additionally, it heats and humidifies inspired air and delivers supplemental oxygen through an integrated port.

» Allows for force inspiration, expiration and suctioning
» Low flow oxygen can be attached directly to the TrachVox oxygen port
» Uses standard 15 mm connector

Medline MDI Spacers

Medline spacers are designed for patients who have difficulty with metered dose inhalers (MDIs). With spacers, more medication is deposited in the lungs and less is deposited in the mouth and throat.

» A simple and economical way to improve effectiveness of inhaler

» Easy to use and helps avoid some of the unpleasant taste of inhaled medication

» Anti-static and compatible with any standard mask with a 22 mm fitting

» Masks are made of a soft silicone and fit snugly to ensure optimal drug delivery

» The collapsible model is portable and convenient

Peak Flow Meters

Peak flow meters help patients manage their asthma and gauge the effectiveness of their treatment program, which may help them predict their next attack.

» Individually calibrated to ensure accuracy

» Durable for years of reliable performance

» The pocket model offers superb convenience and portability

» Available in low range and full range versions – low range models are better for geriatric, pediatric or other patients with diminished flow rates

Peak Flow Meter Color Zones[2]

Green Zone
80- 100% of normal peak flow rate. Asthma is reasonably under control. Continue prescribed management program.

Yellow Zone
50- 80% of normal peak flow rate. Airways are narrowing and may require extra treatment. Alert physician.

Red Zone
Less than 50% of normal peak flow rate. Severe airway narrowing signal. Immediate decisions and actions need to be taken. Alert physician.

SuperSoft Nasal Cannulas

Medical device-related pressure ulcers (MDRPU) have been receiving greater attention. MDRPUs tend to progress rapidly, as they often occur over areas with minimal fatty tissue. Findings indicate that patients that use a medical device are up to four times more likely to develop a pressure ulcer of any kind.[1]

Even short term use of an oxygen cannula can lead to the development of pressure ulcers on the ears and cheeks. The Medline SuperSoft nasal cannula is made of an advanced material that is soft, flexible and non-tacky. Also features curved, non-flared nasal prongs. You will notice a difference right away:

» Maintain skin integrity – Help reduce pressure and friction on the ears and cheeks.

» Promote patient compliance with added comfort – Patients are less apprehensive about wearing a cannula that feels soft and comfortable.

» Reduce costs – No need for the additional time and expense of padding cannulas with foam ear cushions.

» Not made with natural rubber latex.

Manual Resuscitators

Innovations provide clinicians with improved ease of use. Available in infant, pediatric and adult sizes.

A Better Bag

» Delivers up to 99% FIO2

» Maneuverable – The body of the bag swivels 360 degrees for multiple clinician hand positions, helping to reduce clinician fatigue

» Translucent – The translucent, lightweight bag body and components allow for visualization of vomitus or occlusions in the system

» Textured – Provides an enhanced, non-slip grip

» Repositionable – The patient port swivels 360 degrees, allowing the clinician freedom to move around the patient without placing excessive torque or stress on the tracheal tube or mask

» Manometer allows for a clear visual reading of the centimeters of water pressure being delivered to the patient

An Improved Mask

» Firmly Sealing–Premium material provides a soft cushion and a firm seal
